Summary

Software Engineering graduate from Western University with experience building AI-driven and full-stack applications using Python, React, Node.js, and cloud platforms (AWS, GCP). Experienced in developing machine learning systems, API integrations, and scalable backend services. Recognized on the Dean's Honor List (2023–2025) for academic excellence. Passionate about designing efficient software solutions and collaborating in agile teams to deliver impactful products.

Software Development Experience

GeneScope, Capstone Group Project

- Developed a full-stack DNA analysis platform using React, Node.js, MongoDB, and AWS (Amplify, Cognito, S3), improving analysis throughput by 2× through optimized cloud pipelines.
- Integrated GPT-2 and Llama models via custom REST APIs to deliver accessible genetic summaries for both technical and non-technical users.

PigeonPlex, Group Project

- Built a full-stack movie ticketing platform using Flask, MySQL, HTML, CSS, and JavaScript supporting real-time bookings and secure user management.
- Designed a dynamic UI with HTML, CSS, and JavaScript that streamlined ticket purchasing workflows and enhanced user engagement.

Superhero-Search, Personal Project

- Created a secure superhero search platform using React, Firebase authentication and external REST APIs to deliver real-time superhero data and search insights.
- Implemented admin dashboards and role-based access control, improving system security and maintainability.

Professional Experience

Exporior Financial Group Inc.

Executive Director

Oct 2021 – Present

Remote, Canada/USA

- Delivered personalized client consultations and financial solutions across North America.
- Hired, trained, and managed new team members, building a distributed team environment.
- Leveraged CRM tools and data-driven approaches to improve client acquisition efficiency.

TGT Solutions

Software Engineering Intern

Dec 2025 – Mar 2026

Stratford, Ontario

- Designed a 45-question AI readiness assessment framework with a weighted scoring model (0–100) to evaluate AI maturity of small and medium-sized businesses across data, infrastructure, and operations.
- Developed an AI-powered crate assignment pipeline using TF-IDF, SVD, nearest-neighbor search, and XGBoost to optimize order-to-crate allocation, improving crate content prediction accuracy from 54.7% to 65.1%.
- Built AMY, an AI executive assistant using Python, FastAPI, and OpenAI APIs, integrating Google Calendar and Amadeus APIs to support scheduling, travel search, and automated email drafting.
- Created B.O.D.E., a multi-agent AI advisory platform using FastAPI and Python that simulates a 7-member executive board to generate structured strategic recommendations from user prompts.

Education

Bachelor of Engineering Science, Software Engineering

University of Western Ontario

Dean's Honor List for 2023-2025 | Final-Year GPA: 3.7

Sept 2021 – Jun 2025

London, Ontario

Technical Skills

Languages: Python, Java, JavaScript, C++, C#

Frameworks & Libraries: React, Flask, FastAPI, Express.js, Firebase, JavaFX

Machine Learning & AI: TensorFlow, Scikit-learn, XGBoost, TF-IDF, SVD, OpenAI API

Databases: MySQL, MongoDB, SQLite

Cloud & DevOps: AWS (Amplify, Cognito, S3), Google Cloud Platform (GCP), Docker, Nginx

Tools & Practices: Git, JIRA, Jupyter, MATLAB, REST APIs, OAuth, Agile/Scrum
